Summary

Detail-oriented and analytical B.Tech graduate in Computer Science from YMCA University with practical experience in data science and visualization through freelance projects. Skilled in using advanced analytics tools to derive insights and streamline processes for data-driven decisions. Strong communicator adept at presenting quantitative insights to non-technical audiences.

Skills

- **Data Analytics & Visualization:** Advanced Excel (macros, Power Query), Power BI, Tableau, Python for data preprocessing and EDA
 - **Machine Learning:** Logistic Regression, Decision Trees, Random Forest, SMOTE, Anomaly Detection
 - **Programming Languages:** Python, SQL, JavaScript
 - **Web Development:** React, Django, Flask, RESTful APIs, WebSocket
 - **Tools & Frameworks:** Jupyter Notebooks, Scikit-Learn, Pandas, NumPy, TensorFlow, MediaPipe
 - **Cloud & Deployment:** Docker, PythonAnywhere, Render, GitHub Pages
 - **Database:** MongoDB, SQLite
 - **Version Control:** Git
-

Experience

Data Analytics Intern

Native Engineering Company — Oct 2024 - Dec 2024

- Analyzed data sets to identify trends and actionable insights, contributing to improved process efficiency.
- Developed interactive dashboards and reports in Power BI to support data-driven

decision-making across departments.

- Utilized SQL and Python for data visualization, data preprocessing, and automation, reducing reporting time by 20%.

Projects

Real-Time Chat Application

- Developed full-stack chat application using Django Channels and React
- Implemented WebSocket communication with REST API fallback
- Deployed across multiple platforms (PythonAnywhere, Render)
- Technologies: Django, React, WebSocket, SQLite
- [Demo](#) | [GitHub](#)

PS: Username= KJ | Password= 1q2w3e

Data Visualization Dashboard

- Built comprehensive dashboard using Power BI and React
- Implemented real-time data updates and interactive features
- Technologies: React, Power BI, Recharts
- [GitHub](#)

TRP Priority Calculation(Freelance)

Built an algorithm to rank cricket matches based on viewership potential

- Assigned weights to factors like rivalry, series importance, and match timing to compute a TRP score.
- Used Python and Pandas for data processing and visualization, providing insights into viewership trends.
- **Project Link:** [GitHub Repository](#)

Cryptocurrency Data Updater (Freelance)*[Due to Inactivity of my cloud service account the code does not run, Soon plan to change credentials to a free tier one]*

Automated cryptocurrency data fetching and Google Sheets integration for real-time updates

- Developed a Python script to fetch cryptocurrency prices from multiple exchanges, including Wazirx, CoinDCX, Coinswitch, and Mudrex.

- Automated data extraction using APIs and scheduled updates in Google Sheets via `gsread` and OAuth2 authentication.
- Implemented rate limiting, exponential backoff, and error handling for reliable data retrieval under API quotas.
- Enabled real-time monitoring by updating exchange rates in INR, displayed in an accessible Google Sheets dashboard.
- Project Link : [CODE](#)

Text Analysis Assignment: {Completed as part of data science training}

- Developed a Python script for extracting and analyzing text from online articles.
- Implemented web scraping techniques using BeautifulSoup and HTTP requests with the Requests library.
- Analyzed text for sentiment using custom stop words and sentiment word lists.
- [Saved processed text and analysis results into text files and Excel spreadsheets.](#)

Project Link: [GoogleDrive: Text-Analysis-Assignment](#)

Credit Card Fraud Detection System

- Achieved 85%+ accuracy in fraud detection using machine learning
- Implemented SMOTE for data balancing and deployed with Flask/Docker
- Technologies: Python, Scikit-learn, Flask, Docker
- [Demo](#) | [GitHub](#)

Person Detection Tracking System

- Developed real-time tracking model using TensorFlow and MediaPipe
- Implemented classification for "Child" or "Adult" identification
- Technologies: TensorFlow, MediaPipe, OpenCV
- [GitHub](#)

RAG Question Answering System

- Created Q&A model using vector embeddings and Pinecone
- Integrated with Wikipedia for dynamic data retrieval
- Technologies: NLP, Vector Embeddings, Pinecone
- [Demo](#) | [GitHub](#)

Education

Bachelor of Technology in Computer Science and Engineering

YMCA University, Faridabad, India

Data Science Bootcamp

upGrad Knowledgehut, Completed: December 17, 2023

Certifications

- Data Science Bootcamp (upGrad), December 2023
- Web Development (Bolt IOT), October 2021

Additional Skills

- Strong problem-solving and analytical thinking
- Excellent communication and presentation skills
- Experience in client interaction and project management
- Self-motivated learner with proven ability to adapt to new technologies
