Web-Portfolio

nerd-coderzero.github.io

Education

- *Bachelor of Technology in Computer Science and Engineering*
Y.M.C.A University, Haryana
Completed in 2024
- Data Scientist Bootcamp
Certificate in Data Science
Completed in 2023

Skill

- 📊 Data Analytics & Visualization
 - Power BI, Tableau, Excel
 - Python (Pandas, NumPy), Streamlit
- 🧠 Machine Learning
 - Logistic Regression, Random Forest, SMOTE, Scikit-learn
- 💻 Programming & Web
 - Python, SQL, JavaScript, Django, Flask, React
- 🔍 Data mining and analysis
- ✂️ Tools & Deployment
 - Git, Docker, PythonAnywhere, Render, MongoDB

About Me

Detail-oriented Computer Science graduate with lots of self-experience in data analysis, automation, backend development and report generation. Skilled in MS Office, data validation, and extracting insights to support operational decisions. Data Analyst with proficiency in Excel, SQL and Python for behavioral data analysis. Passionate about deriving actionable insights from large datasets, with a strong foundation in statistical math (90%+ in 10th/12th-grade math).

Work Experience

Data Analytics Intern

Native Engineering Company 2024- (Oct - Nov)

Analyzed data sets to identify trends and actionable insights, contributing to improved process efficiency. Developed interactive dashboards and reports in Power BI to support data-driven decision-making across departments. Utilized SQL and Python for data visualization, data preprocessing, and automation, reducing reporting time by 20%.

Projects

News Sentiment Analyzer App | Backend

- Scraped 10+ daily news articles per company using BeautifulSoup, analyzed sentiment (positive/negative/neutral) with Google's Gemini model, and visualized trends via Streamlit.
- Built a query system allowing users to ask questions like *"Show most common positive topics for Tata Motors"*, improving accessibility for non-technical stakeholders.
- Translated insights to Hindi with gTTS, expanding audience reach by 3x for regional decision-makers.
- Tools used: Python, Gemini API, Pandas, Streamlit, FastAPI |
- GitHub : [\[Link\]](#)
- Demo : [\[Link\]](#)

Real-Time Chat Application | Backend

- Developed full-stack chat application using Django Channels and React
- Implemented WebSocket communication with REST API fallback
- Deployed across multiple platforms (PythonAnywhere, Render)
- Troubleshoot WebSocket/REST API integration issues; guided test users through app features
- Technologies: Django, React, WebSocket, SQLite
- [Demo](#) | [GitHub](#)
- PS: Username= KJ | Password= 1q2w3e

Certificates

Web Development
(Bolt IOT), October
2021

Data Scientist
Bootcamp – upGrad
(2023)

Additional Skills

- Strong problem-solving , good at mathematics and analytical thinking
- Excellent communication and presentation skills
- Experience in client interaction and project management
- Self-motivated learner with proven ability to adapt to new technologies

Projects

Student Performance Analysis and Recommendation System

- Performance analysis across multiple parameters
- Historical trend analysis
- Topic-wise strength/weakness identification
- Personalized recommendation generation
- Visual performance insights

Credit Card Fraud Detection System

- Achieved 85%+ accuracy in fraud detection using machine learning
- Implemented SMOTE for data balancing and deployed with Flask/Docker
- Technologies: Python, Scikit-learn, Flask, Docker
- [Demo](#) | [GitHub](#)

RAG Question Answering System | Backend

- Created Q&A model using vector embeddings and Pinecone
- Integrated with Wikipedia for dynamic data retrieval
- Technologies: NLP, Vector Embeddings, Pinecone
- [Demo](#) | [GitHub](#)

Secure File-Sharing System – FastAPI, PostgreSQL, Docker, CI/CD

- Built a secure role-based REST API system supporting Ops and Client user types using FastAPI and JWT
- Implemented email verification, file type restrictions, and encrypted download links using Fernet
- Added role-based permissions for file uploads and access, with protected download via time-limited URLs
- Deployed with Docker Compose and automated testing via GitHub Actions CI/CD pipeline
- Postman collection and environment setup documented for end-to-end manual API testing
- [\[Github\]](#)

AdaptivePrivFL: Privacy-Preserving Federated Learning for Breast Cancer Diagnosis

- Developed "AdaptivePrivFL," a privacy-aware federated learning framework using PyTorch and Opacus (achieved avg. $\epsilon \approx 4.99$) for breast cancer diagnosis on the WDBC dataset.
- Simulated a 5-client non-IID environment, implementing novel strategic client selection (based on data quality & history) and enhanced adaptive model aggregation.
- Achieved 96.49% accuracy and 97.14% F1-score with the global FL-DP model, comparable to centralized training.
- Applied Knowledge Distillation for client-side model personalization, improving average local F1-scores by 1.12%.
- Conducted comprehensive performance comparison against centralized baselines and 5 state-of-the-art research papers.
- Technologies: Python, PyTorch, Opacus, scikit-learn. | [\[Github\]](#)

Boost Physio Clinic Booking System | Backend

Developed a backend system for managing appointments, patient data, and reporting.

- Implemented core functionality for booking, managing appointments, and tracking physiotherapist performance using Java 11 and Maven.
- Applied design patterns (Repository, Builder, Singleton) for scalable and maintainable code.
- Integrated reporting features and ensured system reliability with JUnit tests.
- Packaged and deployed the system using JAR files for easy distribution.
- Project Link : [Google Drive](#)
